Experience

FlyCT — ***Software Development Engineer I*** Jul 2025 – Present · Bangalore

- Led migration of Flyin's decade-old EJS application to **Next.js + TypeScript + MUI**, rebuilding the core funnel — Home, Search Results, Confirmation, Offers — with Server Components, SSR, RTK Query and Redux; shipped the **end-to-end Hotels booking flow** and the **Accounts area** (trip list, trip details), confirmation, and SEO-optimised pages with locale-aware metadata.
- Architected a **unified authentication platform** — **3 sign-in methods** (Mobile OTP, Email/Password, Google) across **2 brands**: resend timers with server-enforced cooldowns, rate limiting, cross-domain account linking, mobile drawers, and GTM/CleverTap instrumentation.
- **Merged 2 separate iOS/Android apps into a single multibrand React Native (Expo) codebase — 1 codebase → 4 store apps** (2 brands × 2 platforms), brand-selected at build time; owned Homepage, Accounts, and Android SDK integrations with RTL-aware Arabic layouts.
- Owned Android **release engineering**: cut app size to **<50 MB** (R8 shrinking without obfuscation + Hermes + AAB splits) with readable production stack traces; AAB/APK build scripts, Google Sign-In SHA fingerprints via Firebase, and Play Console **staged rollouts (5% → 100%)** across internal, closed and open testing tracks.
- Consolidating **4 flight-booking repositories into 1** Next.js codebase: brand-aware feature flags, white-label architecture, locale middlewares, segregated environments and runtime configs for both brands.
- **Sole frontend owner of the Operations Admin Portal** (Flights, Hotels, Visa) with **Node.js backend contributions**: booking management, audit trails, trip queues, modification workflows; built payment-recovery dashboards spanning **6+ payment methods** (Tamara, Tabby, Apple Pay, installments, cards) — retries, status-based workflows, failed-payment recovery.

FlyCT — ***Software Development Engineer Intern*** Jul 2024 – Jul 2025 · Bangalore

- Owned post-booking for the **Visa vertical** (with Musafir) — the team's first Next.js 15 + TypeScript build, with **custom theming**: Confirmation, Status Tracking, Document Upload (validation, previews), Order Retrieval.
- Built a **3-currency wallet platform** (SAR/AED/EGP) for business and ops teams: wallet creation, balance management, credit/debit operations, and earned/used/refunded transaction tracking.

Projects

Merlin Copilot | React, Gemini 2.5, deterministic retrieval — 2nd Place, FlyCT AI Hackathon 2026

- AI assistant answering natural-language questions over trip-response JSON to kill JSON-to-UI debugging overhead; pipeline: LLM intent detection → **deterministic markdown/payload retrieval** → LLM humanization → source-backed answers, grounded and traceable by construction. Built in a **2-day hackathon**, hardened for production in 2 more; shipped via Crisis Manager.

Maze Rush | React, TypeScript, Cloudflare Workers, Durable Objects, WebSockets — maze.tinygridlabs.com 2026

- Real-time multiplayer maze race: server-authoritative state in one Durable Object per room, typed end-to-end WebSocket protocol, seeded generation (growing-tree + braiding) with a **100-seed property-based Vitest suite**; anti-cheat by construction — opponents' positions never serialised to racing clients.

Technical Skills

Languages: TypeScript, JavaScript (ES6+), Java, HTML5, CSS3

Frontend: React, Next.js (App Router, RSC, SSR), React Native (Expo), Redux Toolkit, RTK Query, TanStack Query, MUI, Tailwind, Sass

Backend & Data: Node.js, REST APIs, Prisma, PostgreSQL, Stripe & payment-provider integrations

Architecture: White-label / multibrand systems, feature flags, i18n & RTL, SEO, WebSockets, Cloudflare Workers

Release & Tooling: Play Console (staged rollouts, testing tracks), Firebase, R8/Hermes build optimisation, Git, CI/CD, GTM, CleverTap, Vitest

Achievements

- **2nd Place — FlyCT Internal AI Hackathon (2026)** for Merlin Copilot — judged on innovation and production viability; shipped to production.

Education

Chitkara University — ***B.Tech, CGPA 9+/10*** 2021 – 2025
