Experience

FlyCT Jul 2025 – Present
Software Development Engineer I *Bangalore, KA*

- Led the migration of Flyin's decade-old EJS application to a modern Next.js + TypeScript + MUI architecture, rebuilding critical user journeys including Home, Search Results, Confirmation, and Offers pages using Server Components, SSR, RTK Query, and Redux while improving maintainability and responsiveness across devices.
- Architected and delivered a unified authentication platform supporting Mobile OTP, Email/Password, and Google Sign-In across Flyin and Cleartrip, implementing resend timers, rate limiting, cross-domain account linking, mobile drawers, and GTM/CleverTap instrumentation for analytics and production debugging.
- Contributing to the consolidation of four flight-booking repositories into a unified Next.js codebase with brand-aware feature flags, white-label architecture, locale-aware middlewares, segregated environments, and runtime configurations supporting both Flyin and Cleartrip ecosystems.
- Implemented feature flags and testing toggles across brands, enabling safe rollout of new features while maintaining separate configurations and user experiences across products.
- Sole frontend owner of the Operations Admin Portal used across Flights, Hotels, and Visa verticals, building dashboards for booking management, payment information, audit trails, trip queues, modification workflows, and operational monitoring across business teams.
- Built and maintained payment recovery dashboards supporting multiple payment providers including Tamara, Tabby, Apple Pay, Installments, Credit Cards, and Debit Cards, implementing UI-side business logic, payment calculations, retries, API integrations, status-based workflows, and failed-payment recovery handling.
- Contributed to the UI architecture of Crisis Manager, an internal operational dashboard selected from FlyCT's AI Hackathon projects for production deployment, and collaborated across teams to integrate shared modules into operational platforms with a consistent user experience.

FlyCT Jul 2024 – Jul 2025
Software Development Engineer Intern *Bangalore, KA*

- Owned the post-booking experience for FlyCT's Visa vertical in collaboration with Musafir, building Confirmation, Status Tracking, Document Upload, and Order Retrieval dashboards using Next.js 15 and TypeScript.
- Implemented document management workflows including file validation, previews, upload processing, status tracking, and post-booking API integrations while enabling operations teams to handle booking modifications, failures, and updates through the Admin Portal.
- Built a multi-currency wallet management platform supporting SAR, AED, and EGP for business and operations teams, enabling wallet creation, balance management, credit/debit operations, and transaction tracking for earned, used, and refunded balances.

Projects

Merlin Copilot | React.js, Gemini 2.5, NLP, Deterministic Logic Engine 2026

- Built Merlin Copilot, an AI-powered developer and operations assistant leveraging Gemini 2.5 to eliminate JSON-to-UI debugging overhead through intelligent field inspection, mapping-error analysis, and natural language trip-data exploration.
- Designed a multi-stage retrieval pipeline: Trip Response → Intent Detection (LLM) → Markdown Knowledge Retrieval → LLM Humanization → Structured Answer, ensuring traceable and zero-hallucination responses backed by source evidence.
- Secured **2nd Place** at FlyCT's First Internal AI Hackathon for innovation and production viability.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, Java, HTML5, CSS3

Frontend: React.js, Next.js, React Native, Redux Toolkit, RTK Query, Tailwind CSS, Material UI, Sass/SCSS

Rendering & Architecture: Server Components, SSR, Feature Flags, White-label Architecture, Responsive Design

APIs & State Management: REST APIs, Redux, RTK Query, Async State Management

Analytics & Tools: Git, GitHub, CI/CD, GTM, CleverTap

AI & Productivity: Gemini 2.5, NLP, Prompt Engineering, Deterministic Logic Systems

Education

Chitkara University 2021 – 2025
Bachelor of Technology (B.Tech) *CGPA: 9+/10*

Achievements

- **2nd Place – FlyCT Internal AI Hackathon (2026):** Built Merlin Copilot, an AI-powered developer efficiency platform combining NLP intent parsing with deterministic execution for traceable and zero-hallucination debugging workflows.
